

Arnab Roy

Overview

I design and productize cryptographic protocols for decentralized systems, with applications to finance and digital assets. My research spans zero-knowledge proofs, blockchain, secure communication, biometric authentication, data privacy, post-quantum cryptography, formal verification, hardware enclaves, machine learning, and quantum-inspired algorithms. I have been a core contributor to several products, 50+ research publications, and 40+ patents.

Education

Ph.D. in Computer Science, 2009
Stanford University

B.Tech. and M.Tech. in Computer Science and Engineering, 2004
Indian Institute of Technology Kharagpur

Employment

2022 - :	Research Scientist Mysten Labs, Palo Alto, CA
2021 - 2022 :	Research Scientist Manager Meta Platforms Inc, Menlo Park, CA
2012 - 2021:	Senior Research Manager (2021) and Global head of cryptography research and blockchain OSS (2020-21) Fujitsu Research of America, Sunnyvale, CA
2010 - 2012:	Post Doctoral Researcher IBM Thomas J. Watson Research Center, Hawthorne, NY

Awards and Honours

Young Alumni Achiever Award 2019, IIT Kharagpur.

Siebel Scholar Class of 2006, Stanford Computer Science.

Prime Minister of India Gold Medal 2004, IIT Kharagpur.

Top scoring paper, PKC 2018, a premier cryptography conference.

Best Paper Award, AsiaCrypt 2013, a flagship conference in cryptography.

Co-Chair, NIST Big Data Security and Privacy Subgroup, 2013-20.

Product Contributions

At Mysten Labs, I have been a core contributor to several products at the intersection of cryptography, distributed systems, language design, and formal verification, including:

1. zkLogin: Wallets based on email and social logins. Co-inventor, prototype and product collaborator, lead for the MPC ceremony, and co-lead for publications at CCS, SBC, and RWC.
2. Seal: Decentralized secrets management governed by Move policies. Design coauthor, whitepaper lead with cryptographic formalization and auditing.
3. Hashi: Decentralized Bitcoin collateralization primitive. Whitepaper lead for cryptographic formalization, design, and prototyping of novel research components.
4. Confidential Transfers: Encrypted balances with auditability. Co-designer and whitepaper lead with cryptographic formalization, as well as lead for the design and prototyping of upcoming novel research optimizations accompanied with Lean proofs.
